Infrared Elements

Glo-Quartz infrared radiant heaters are fast responding and a very efficient source of radiant energy. With heat-up capabilities of 45 to 50 seconds, and complete cool down in approximately 15 seconds, this is an ideal heating device for use in applications where frequent line stoppage is expected or immediate heat-up and cool down is essential.

Technical Data

- For longer life you should not exceed: 30 watts/inch for 3/8" diameter quartz, 40 watts/inch for 1/2" diameter quartz, 60 watts/inch for 5/8" diameter quartz
- Heaters are designed for horizontal use only
- The translucent quartz provides an infrared wave length at an energy peak of 2.5-4.0 microns, when at full voltage, and is suitable for most industrial applications
